Professional Experience

Foresight Diagnostics

Lab IT Support Analyst, November 2024 – Current

- Asset management: **Azure**, **MS Intune**, Asset Panda, Druva, Jamf, SplashTop, **Cisco Meraki**, **Mac/PC**
- User management: Okta SSO, IDmelon (Labs EQ), IntelliM (office), PrinterLogic, **Mimecast**
- NetSuite, Confluence, Jira, **Adobe**, **sFTP**, SmartSheet, LucidCharts, **Box drive**, Slack, FoxPass, **Bitwarden**, **Zendesk**
- Software development: Visual Basic, **Python**, Google Apps Script, Slack **API**, GreenLight Guru **API**, Box drive **API**

Coding Dojo

Student in Full Stack Development course, January 2024 – June 2024

- HTML, CSS, **JavaScript**, PHP, **Python**, **Java**, SQL
- Bootstrap, React.js, Node.js, Express.js, Django, ThymeLeaf, JPA, JSTL
- **MS SQL**, **Oracle**, **MySQL**, MongoDB
- **Visual Studio**, Spring Boot/Spring Tool Suite, Postman

Optum

Senior Tier 2 Technical Support, November 2016 – November 2023

- Call intake, ticket distribution, **Team Lead**, Incident Reports, **Escalation & Defect Management**.
- Application support for Medical Claim Adjudication, serving Universities & government clients, CRM.
- Work with both payor (insurance) and provider (hospitals), both **Tech** and **Non-Tech clients**.
- Phone, Email, Chat support, both **Remote** and **Onsite** support.
- Provided **DBA** service, **MS SQL Server**, **Oracle**, **MySQL**, **MongoDB**.
- Server Maintenance, Database **Maintenance**, Database **Backups & Recovery**.
- Monitor performance, **Dynatrace** for Claims Manager and **Epic** product servers.
- **SQL & Batch scripts** for database reporting, **Data Analyst**, server **automation**.
- Maintain Knowledge base, **SharePoint**, Tech Wiki, **RCA** reports for Knowledge Base.
- Ticketing systems, **ServiceNow**, **Salesforce**, JIRA, billing, Vendor Management.
- **Windows 10**, **Windows Server**, **Mac OS X**, Ubuntu, RedHat **Linux**.
- Dev Ops, **QA testing**, Premium Client support team.

Pikes Peak Community College

Tier 1 Desktop Support, August 2014 – September 2016

- Performed **hardware** and **software** upgrades for Windows and Apple computers.
- **Troubleshoot** and **resolve** hardware and software issues.
- Conduct new hire onboarding, tech mentoring.
- Networking hardware, including **switches**, **routers**, and cat5 cables.
- Created service orders for defective parts and technical assistance.
- User management via **Active Directory**.
- Support **Microsoft 365** suite, and **Mac OS X**.

Connect for Health Colorado

Help Desk Support, May 2013 – May 2014

- Provide Help Desk and **Desktop Support** to 200 employees.

Example Technical Projects

Server Side Automation for Claims Manager, Application maintenance, Database report and delivery system

- Force compliance of App services & hung processes, archive logs, automate database maintenance.
- Coordinate deployment windows, server upgrade times, migrations.
- Windows Server, PowerShell, Batch script, SQL, PHP, Oracle & SQL Server.
- Trigger via task scheduler, connect to internal host, retrieve client specific queries & separate auth server.
- Connect to client specific database, query database, route data back to host server.
- Format report, secure delivery to appropriate parties that client, billing department rep & client rep & leadership.
- No clear text, all encrypted, client specific servers & credentials.

User Side Integration for Gmail & Mimecast, label-based filtering and domain reporting system

- Created an in-Gmail spam/safe domain filtering, tailored to an environment restricting traditional options.
- System adds "spam" and "safe list" labels in Gmail, creating them automatically if not already present.
- Adds labeling system to manage spam leakage with user curated input.
- Compares inbound to labeled emails, updates/removes accordingly, multi selection functionality.
- Supports multi selection functionality built into Gmail
- Retention folders for both spam and safe emails separately for easy adjustments.
- Provides bulk-reporting directly within Gmail or needing Mimecast personal portals.
- Scheduled script to extract all domains labeled as spam or safe list as CSV-formatted data.
- Automatically routes reports & data to system admin for import into Mimecast block and bypass filters.
- Reduced false negative spam by over 80%, improved admin efficiency, and enabled user-driven spam control.
- No dependencies, no third-party products, no additional infrastructure or external services.
- Designed for future expansion into a web app to support broader adoption.
- Creative solution for a common problem with unique constraints.

Slack API Data Miner & Tag Search Tool – Internal Messaging Analytics, Reporting Automation

- Designed and deployed a standalone GUI-based application for IT internal use.
- Query Slack data across multiple private channels using bot-level API access only.
- Supports full-text search for tags, usernames, and Slack user groups with automatic ID resolution.
- Dynamically queries and throttling functions to stay within Slack rate limits.
- Parses messages, first-thread replies, aggregates results by timestamp, and prepares custom reports.
- Created in Python using Slack SDK, Tkinter, CSV, datetime, and custom retry handlers to optimize API call efficiency.
- Reduced manual search efforts by over 90% and enabled flexible reporting without Slack admin privileges.

Education & Certifications

Coding Dojo of Denver

- Full Stack Software Development Program, January 2024 – June 2024
- Includes CD certificate

Pikes Peak Community College

- Degree #1, Computer Network Technology, August 2014 - September 2016
- Network+, CompTIA Certification

Pikes Peak Community College

- Degree #2, Computer Information Systems, August 2014 - September 2016
- Security+, CompTIA Certification
